• Nurses		5-7		3-5
• Professional midwives				
• Physicians		2-3		2-3
<i>Totals</i>	<i>8</i>	<i>19-38</i>	<i>13-17</i>	<i>5-8</i>

1. This plan suggests approximate numbers of respondents. Conduct only as many interviews as necessary to identify trends and patterns.
2. Multiply the figures above for each set of characteristics that may make a difference to current practices, i.e. different ethnic or geographic groups.
3. Add or refine specific topics and/or questions within the instruments as early data indicate.
4. Add new categories of respondents if suggested by emerging data.
